

Jason N Mansfield

Platform Engineer and DevOps

About me

Platform Engineer with expertise in designing secure, cloud-native systems. Specialized in GitOps, infrastructure automation, and LLMOps workflows.

Stack Highlights:
Kubernetes | Helm
ArgoCD | Terraform
Llama Stack | Ollama
Docling | Pandas
Keycloak | Vault

Languages:
Python | Bash | JS | Rust

AI/ML:
Vertex AI | LLMops
Diffusers | SDXL

Bluf
Jason Mansfield
USN 2001 - 2005
USCG 2005 - 2023

Specialization
GitOps / DevOps
Platform Engineering
LLMOps / AI Infra
DevSecOps

Clearance
TS//SCI w CI Poly

PROFESSIONAL EXPERIENCE

2024-Pres

24x7Systems

PLATFORM ENGINEER / LEAD · CME

- Runtime team member:** Managed K8s cluster patching via rafay blueprints and helmfiles.
- Operations Leadership:** Managed K8s cluster stability and emergency response for high-stakes outages.
- Python tooling** Built Pydantic type safe tooling for running a suite of validation tools such as confest, kubeconform and istioctl against k8s manifests.
- AI Augmentation:** Integrated **Vertex AI** and **Gemini** to accelerate root-cause analysis for complex K8s networking and Terraform state drift.
- Terraform:** Performed changes in Terraform primarily for resources in AWS architecture, k8s and associated application needs.
- Automated Documentation:** Leveraged **Python Sphinx** and AI-assisted workflows to build self-service documentation pipelines. Utilized Sphinx templating also know as Jinja templating engine to enhance specific pages requiring advanced features.
- Security Automation:** Developed custom Anchore/Harness integrations to automate vulnerability scanning for containerized workloads.
- Artifact Governance:** Managed JFrog Artifactory lifecycles to enforce security standards for hardened UBI images.
- GitOps:** Built many CI/CD pipelines via Gitlab and Harness after exhaustive testing using compose in many cases.

2023-2024

CACI International

DEVOPS ENGINEER · EPT

- GitOps Orchestration:** Led infrastructure engineering for GitLab and Vault; managed automated **Kubernetes** delivery via **ArgoCD**.
- State Enforcement:** Ensured 100% state-sync across cloud environments using ArgoCD and GitOps best practices.
- Custom Tooling:** Built Python and Bash automation for platform API integrations and dynamic resource scaling.

TECHNICAL RESEARCH & APPLIED AI

LLMOps

Orchestrating local model deployments via **Llama Stack** and **Ollama**. Engineering custom **Modelfiles** and external prompting strategies to tune model behaviors.

RAG & ETL

Utilizing **Docling** for high-fidelity document parsing and **Pandas** for structured data transformation to optimize RAG context-window precision.

Generative Art

Exploring **Hugging Face Diffusers** for game asset creation; utilizing SDXL pipelines for procedural textures and automated concept generation.

Systems

Implementing high-performance utility tools in **Rust** to enhance existing Python-based infrastructure automation and CLI tooling.

MILITARY HISTORY (SELECTED HIGHLIGHTS)

2021–2023

USCG CYBER

IT SPECIALIST 1ST CLASS · COA Branch 📍

Blue Team Analyst. Developed tactical "Ruck Kits" for field operators. Taught **Cisco** switch programming and authored technical guides.

2014–2017

USCG

IT SPECIALIST 2ND CLASS · CGC DILIGENCE 📍

Independent Network Admin. Managed **Cisco 3750G** switches, Server 2008 R2, and TACLANE encryption systems.

DEGREES & CERTS

BS Computer Science	Regis University (ABET Accredited)
CompTIA Security+	DoD 8570 Baseline (Expired)
CompTIA CySA+	Cybersecurity Analyst (Expired)
